

## **The Eurie '93 Handbook.**

**Memorandum of Understanding (MoU) on the Implementation of the EURO-ISDN. ISDN MoU Implementation and Management Group - IMIMG, Report of the 9th Meeting, Bruges 22 - 24 June 1993, Annex 11: page 4**

### **"Introduction**

This is the formal agreement between IMIMG and Ovum for the production of the Eurie '93 Handbook.

### **Contents**

The Handbook will be designed to answer the questions which users will be asking in the light of the Euro-ISDN event, Eurie '93. Much of the effort will be focused on achieving a clear and high quality presentation, ensuring that users can readily find and understand the information they need. We propose the following specification for the contents of the Handbook, based on that drawn up by IMIMG members in Dublin.

#### **1 The Euro-ISDN Event**

Background to the Event, the work of IMIMG. Overview of Euro-ISDN. A description of each application being demonstrated in the Event: the application itself, the hardware and software, the network access, the locations where the application is being used, the times and places, where the application can be seen and contact details for further information.

#### **2 Euro-ISDN services**

Geographic coverage of ISDN (% of lines; cities), current and planned over the next five years. Availability of bearer and supplementary services and teleservices in each country, current and planned. International connections and the services supported on each route, current and planned. Pre-Euro-ISDN services.

#### **3 Euro-ISDN tariffs**

Overview of European ISDN tariffs (in ECUs) and comparison with PSTN. Each country's ISDN tariffs in detail (in local currency).

#### **4 Euro-ISDN customer systems**

Comprehensive catalogue of Euro-ISDN equipment: PBXS, multiplexers, voice handsets, PC cards, PC applications, terminal adaptors, Group 4 fax, video phones. We aim to make the catalogue as complete as possible and will talk to and include the products of at least 100 equipment suppliers. (Should IMIMG members feel that particularly important suppliers are being excluded, they will be able to nominate them to be included in addition.) We shall identify the Euro-ISDN equipment they expect to have approved and available in each country by the end of 1994. The main catalogue will be organised by supplier; listings by country and by equipment type will also be provided. This chapter will also include an overview of equipment trends, including pricing.

#### **5 Euro-ISDN contact points**

Appropriate names, addresses, telephone and fax numbers for operators, equipment suppliers, type approval bodies and test laboratories. "
